Experience

Research

California Institute of Technology   **Pasadena, CA**
Burke Fellow   *2023–*

Investigated a variety of problems in quantum algorithms, including (but not limited to):

- Hardness of approximation for quantum spin glasses
  - Showed disordered, sparse quantum spin models exhibit average-case algorithmic hardness-of-approximation in their ground state problem. (arXiv 2025)
  - Showed the SYK model exhibits no glassiness to very low temperatures; also showing low-energy states of the SYK model have very high circuit complexity. (arXiv 2024)
  - Demonstrated exact asymptotic value achieved by lowest-energy product states; also bounded the asymptotic value of the true ground state. (arXiv 2024)
- The trainability of variational quantum algorithms
  - Proved quantum neural networks asymptotically are Wishart processes, thus unifying many previous models of trainability in such networks. (ICLR 2025)
  - Surveyed links between variational quantum algorithms not exhibiting barren plateaus in their loss landscapes and the ability for classical algorithms to efficiently simulate them; first demonstration of the classical simulability of quantum convolutional neural networks when they are efficiently trainable. (arXiv 2023)
- The expressive power of quantum machine learning models using techniques from quantum foundations
  - Used quantum contextuality to show arbitrarily large, unconditional expressivity separations between a class of quantum recurrent models and a broad class of classical neural sequence models; also showing the first lower bound on the classical complexity of simulation of certain subgroups of the Clifford hierarchy. (arXiv 2024)

Massachusetts Institute of Technology — **Cambridge, MA**

Ph.D. student, Aram Harrow and Mikhail D. Lukin groups — *2017–2023*

Investigated a variety of problems in quantum algorithms, including (but not limited to):

- The trainability of variational quantum algorithms
  - Used techniques from random matrix theory, Morse theory, and statistical query learning to show shallow, local variational quantum circuits are difficult to train. (Nat. Comm. 2022)
  - Used techniques from Morse theory and large deviations theory to show shallow, nonlocal variational quantum circuits are difficult to train. (ICLR 2022)
- The expressive power of quantum machine learning models using techniques from quantum foundations
  - Used quantum contextuality and the constant rank theorem to show an unconditional expressivity separation between a class of quantum recurrent models and a broad class of classical neural sequence models; also showing the first lower bound on the classical complexity of GKP state simulation. (PRX Quantum 2022)
  - Used quantum contextuality to show an expressivity separation between a quantum generative model and certain classes of Bayesian networks. (PRX 2022)
- Algorithms for near-term quantum computers
  - Used coresets to improve throughput in variational quantum algorithms. (Electronics 2021)
  - Constructed GAN-like architectures where a large classical model is aided by a small quantum computer. (PRA 2019)

Zapata Computing — **Cambridge, MA**

Internship — *Summer 2018, 2019*

Investigated the use of near-term quantum computers for variational quantum algorithms. Investigated the performance of the QAOA on a combinatorial optimization formulation of factoring (QTOP 2019), as well as designed a method for using eigenstate thermalization to train quantum Boltzmann machines. (arXiv 2019, results presented at an invited talk at the Quantum Machine Learning and Data Analytics Workshop 2019)

Harvard University — **Cambridge, MA**

Undergraduate research assistant, Mikhail D. Lukin group — *2015–2017*

Helped construct the "Atom Array" Rydberg atom experiment, investigating the use of controllable optical tweezers for deterministic trapping of ultracold atoms. Wrote and implemented the initial optical tweezer control algorithm in C++, interfacing with a software-defined radio. (Science 2016)

Teaching

California Institute of Technology — **Pasadena, CA**

Undergraduate student mentor — *2024*

Mentored undergraduate student in research project studying quantum-classical hardness-of-approximation separations in the sparse SYK model (results in preparation).

QHack, Xanadu Quantum Technologies — **Online**

Speaker — *2023*

Presented lecture on quantum machine learning at QHack, a free quantum hackathon organized by Xanadu. Answered questions from students involving their projects throughout the hackathon.

Massachusetts Institute of Technology — **Cambridge, MA**

Teaching assistant, 8.371[J] (Quantum Information Science) — *2023*

Aided in problem set creation and grading. Assisted students on assignments and in understanding the material in weekly office hours.

Massachusetts Institute of Technology — **Cambridge, MA**

High School Summer Program (HSSP) lecture — *2019*

Presented lecture on ongoing research in quantum algorithms.

○ **Massachusetts Institute of Technology** — **Cambridge, MA**
Teaching assistant, 8.311 (Electromagnetic Theory) — *2019*
Led weekly recitations and prepared associated online lecture notes. Assisted students on assignments and in understanding the material in weekly office hours.

○ **Massachusetts Institute of Technology** — **Cambridge, MA**
Master's student mentor — *2019*
Mentored master's student in research project developing methods for quantum compilation (Master's thesis, results published in ACM Trans. Quantum Comput. 2021).

Reviewing

Served as a reviewer for:

- *Annales Henri Poincaré*
- *Communications in Mathematical Physics*
- *FOCS*
- *ICLR*
- *ICML*
- *Nature Communications*
- *NeurIPS*
- *npj Quantum Information*
- *Machine Learning: Science and Technology*
- *Mitacs*

Talks

○ *Efficient Learning Implies Quantum Glassiness*, invited talk, Understanding Quantum Machine Learning workshop (2025)
○ *Efficient Learning Implies Quantum Glassiness*, invited talk, University of Bologna Seminar (2025)
○ *Arbitrary Polynomial Separations in Trainable Quantum Machine Learning*, invited talk, QTML (2024)
○ *Arbitrary Polynomial Separations in Trainable Quantum Machine Learning*, invited talk, aQa seminar (2024)
○ *A Unified Theory of Quantum Neural Network Loss Landscapes*, invited talk, Quantum Machine Learning seminar, Google (2024)
○ *Rethinking Quantum Learning Algorithms*, invited keynote talk, MMM11 (2024)

- *A Unified Theory of Quantum Neural Network Loss Landscapes*, invited talk, Quantum Learning Seminar, F.U. Berlin (2024)
- *Arbitrary Polynomial Separations in Trainable Quantum Machine Learning*, invited talk, QED-C Quantum Talent Showcase (2024)
- *Arbitrary Polynomial Separations in Trainable Quantum Machine Learning*, invited talk, SeeQA (2024)
- *Arbitrary Polynomial Separations in Trainable Quantum Machine Learning*, invited talk, Los Alamos National Laboratory (2024)
- *Quantum Theory and Algorithms*, invited talk, Planning Workshop on Quantum Computing, ASPLOS (2024)
- *Rethinking Quantum Neural Networks*, invited talk, CSUN (2024)
- *Interpretable Expressivity Separations in Trainable Quantum Machine Learning*, invited talk, IQIM Seminar, Caltech (2024)
- *Enhancing Generative Models via Quantum Correlations*, invited talk, Tensor Network Reading Group, Mila (2023)
- *A discussion on QML*, panel, CIFAR Quantum Information Science Program Meeting (2023)
- *Interpretable Quantum Advantage in Neural Sequence Learning*, invited talk, Centre for Quantum Technologies (2023)
- *Efficient classical algorithms for simulating symmetric quantum systems*, invited talk, Centre for Quantum Technologies (2023)
- *The Expressive Power of Restricted Quantum Machine Learning Architectures*, invited talk, QHack (2023)
- *Contextuality for Quantum Advantage*, invited tutorial, Harvard University (2022)
- *Interpretable Quantum Advantage in Neural Sequence Learning*, invited talk, Masaryk University (2022)
- *Critical Points in Hamiltonian Agnostic Variational Quantum Algorithms*, invited talk, Quantum Research Seminars Toronto (2021)
- *Critical Points in Hamiltonian Agnostic Variational Quantum Algorithms*, invited talk, Centre for Quantum Technologies (2021)
- *Critical Points in Hamiltonian Agnostic Variational Quantum Algorithms*, invited talk, Quantum Algorithms and Applications seminar, Microsoft (2021)
- *Quantum Advantage in Basis-Enhanced Neural Sequence Models*, Quantum Techniques in Machine Learning (2021)
- *Near-Term Quantum-Classical Associative Adversarial Networks*, Quantum Techniques in Machine Learning (2020)
- *Quantum Machine Learning on NISQ Devices*, invited talk, Tufts University (2020)
- *Improved Training of Quantum Boltzmann Machines*, American Physical Society March Meeting (2019)

Awards and Honors

- Sherman Fairchild Prize Postdoctoral Fellowship, California Institute of Technology (2023)
- Graduate Research Fellow, National Science Foundation (2017)

- ○ Dean of Science Fellow, Massachusetts Institute of Technology (2017)
- ○ Harvard College Scholar, Harvard University (2015)

Education

○ **Massachusetts Institute of Technology** **Cambridge, MA**
Physics *2017–2023*
Ph.D., co-advised by Aram W. Harrow and Mikhail D. Lukin, 5.00/5.00 GPA (Ph.D. thesis)

○ **Harvard University** **Cambridge, MA**
Physics *2015–2017*
A.M., 3.89/4.00 GPA, 3.95/4.00 major GPA

○ **Harvard University** **Cambridge, MA**
Physics and mathematics joint concentration, computer science secondary *2013–2017*
A.B., 3.92/4.00 GPA, *magna cum laude* with Highest Honors in physics
